

VR裡,男子醒來在某個意識層面,所見 所聽所感的是記憶?夢境?虛擬實景?還 是死前的意識回返?影像中敘述著「您正 在使用『生前記憶續存服務』,您將可選 擇三段記憶。在您生命終結時,本服務將 刺激您的神經元使其顯影。記憶記載時間 爲一根火的時間…」。

In the work, a man wakes in an uncertain dimension of consciousness. Are what he sees, hears, and feels his memories? Or are they a dreamland, virtual reality, or terminal lucidity? A voice says, "You are currently using the 'Living Memory Renewal Service.' You will be allowed to select three memories. When you are about to die, this service will stimulate your neurons to elicit the designated memories. The time you have to record the memories is the duration of a flame..."

這些以眼、耳、鼻、舌、身、意接收下來的記憶,儲存成文字、圖像、聲音、影像......。藉由記憶的碎片,我們得以回返某個特定的時間點,讓時空扭曲交疊,但記憶卻不一定可靠。

The memories perceived through the eyes, ears, nose, tongue, body, and mind are stored as words, images, sounds, moving images....

Memory fragments allow us to return to specific points in time, distorting and overlapping time and space. However, memories aren't always reliable.

記錄此時此刻的你,留給未來的自己。 Record something about yourself at the moment and keep it for the future.
